## MICRO DUO – doubly visible

The MICRO DUO ensures highly visibility in any everyday situation. Thanks to the stable ring holder, the practical size and the flexible silicon mounting, the possible uses of the safety light are practically unlimited – whether it is fitted to a rucksack, bicycle, key ring or pram.

The two LED lights are not only extremely easy to use thanks to the integrated pushbuttons, they can also be controlled individually. Very different light combinations can be created with the two light modes (permanent and flashing) and the two colours of the lights (red and white). This results in a visibility range of around 50 metres, which allows the user to be seen by all road users even in darkness. The burn time of approx. 60 hours and spray water protection in acc. with the IPX 4 standard make the MICRO DUO a reliable companion for everyday use.

The MICRO DUO is available in four colours: white, black, silver and red. The safety light will be available at a RRP of €9.95 from the beginning of September 2018. Two lithium batteries are included in the scope of delivery.
